hypersensitivity and pain treating $_{
m for}$ English protein 52-58; 73pp; channel sodium Page 4 Claim

2a (SNS-2a). a method for for assaying modulators The present sequence encodes rat sensory neurone specific 2a SNS-2a is a sodium channel protein. SNS-2a can be used in a mathe identification of a modulator of a sodium channel, and for compounds which modulate sodium flux. The sodium channel can be used in a medicament for the treatment of pain or hypersensitivity.

                                                                                                                                                                                                                                                                                          The present sequence is that of cDNA encoding a novel rat tetrodotoxin resistant sodium channel, termed NaN (see AAB20122). The cDNA was isolated from a dorsal root gangliat issue cDNA ilbrary by PCR amplification using generic primers (from conserved resions of a-subunit sodium channel, proteins) and NaN-specific resions of a-subunit sodium channel, proteins) and NaN-specific copen reading frame shows 738 similarity to the human NaN sequence open reading frame shows 738 similarity to the human NaN sequence (see AAF30101). NaN belongs to the a-subunit voltage-gated sodium channels underlie the generation and propagation of impulses in channels underlie the generation and propagation of impulses in expression of NaN on sensory neurons innervating the body (dorsal root ganglia) and the face (trigeminal ganglia), but not on other therapeutic uses in relation to acute and/or thronic pain pathologies. A claimed method of treating pain, paraesthesia nod/or hyperexcitability phenomena in a human or animal subject involves administering an agent that allers sodium current flow through NaN channels, or which modulates transcription or translation of NaN mannels or parts of ganglia or triggminal
                                                                                                                                                                                                                    sodium
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       nel expression or

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The present sequence encodes a type 5 sodium channel protein designated PN5. The protein is a sodium ion channel of the nervous system, and is highly expressed in plexiform and dorsal root ganglia. The protein can be used to identify inhibitors of sodium channel proteins that are resistant to tetrodotoxin (TTX) The inhibitors are potentially useful for treating epilepsy, stroke, diabetic neuropathy, tranmatic injuries, AIDS related neuropathy, and especially neuropathic pain, e.g. migraine and

The Naw channel CDNA was obtained from Sprague-Dawley rat DRG cDNA by PCR and RACE amplification (see also AAX87603-17). Rat, mouse and human NaN nucleic acids (see AAX87600-02) and polypeptides (see AAY06596-98) are provided. The invention also includes expression vectors and transformed host cells, methods for identifying tissues and cells
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              nucleic acids encoding sodium channels, used to develop treating acute or chronic pain or hyperexcitability

channel activity or NaN channel mRNA transcription or translation, and a method for using such agents to treat acute or chronic pain, paraesthesia and hyperexcitability phenomena. The preferential expression of NaN in sensory DRG and trigeminal neurons provides a target for selectively modifying the behaviour of these nerve cells while not affecting other nerve cells in the brain and spinal cord. The NaN gene has been named Scnlla. that express NaN, methods for it channel activity or NaN channel and a method for using such age and amethod for using such age or areasthesia and hyperexcitability paraesthesia and hyperexcitability contained for selectively modifying the nanget for selectively modifying the nanged sort while not affecting other nerved to while not affect and the nerved to while not affect the new manual to the nerved to while not affect the new manual to the new manual to

system nervous the oţ sodium channel Isolated DNA encoding

90pp; French. 5A-E; Fig Example

The present sequence encodes a type 5 sodium channel protein designated PNS. The protein is a sodium ion channel of the nervous system, and is highly expressed in plexiform and dorsal root ganglia. The protein can be used to identify inhibitors of sodium channel proteins that are resistant to tetrodotoxin (TTX). The inhibitors are potentially useful for treating epilepsy, stroke, diabetic neuropathy, tranmatic injuries, AIDS-related neuropathy, and especially neuropathic pain, e.g. migraine and headache

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The present sequence is that of cDNA encoding a novel mouse tetrodotoxin resistant sodium channel, termed NaN (see AAB20124). The cDNA was isolated from trigeminal ganglia cDNA using primers (see AAF30120-21) based on rat NaN sequences. Mouse NaN shows 68% similarity to human NaN (see AAB20121). The gene encoding NaN, termed Schlia, is located on mouse chromosome 9. NaN belongs to the a-subunit voltage-gated sodium channel protein family and produces a TTX-R sodium current. Such channels underlie the generation and propagation of impulses in excitable cells such as neurons and muscle fibres. Preferential expression of NaN on sensory neurons innervating the body (dorsal root ganglia) and the face (trigeminal ganglia), but not on other neurons, makes it a very useful target

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       atcagaagettcatgattcgcatctctgtccattcagtcttcagcatgttcattatctgc 429
for diagnostic and/or therapeutic uses in relation to acute and/or chronic pain pathologies. A claimed method of treating pain, paraesthesia and/or hyperexcitability phenomena in a human or animal subject involves administering an agent that alters sodium current flow through NaN channels, or which modulates transcription or translation of NaN mRNA, in dorsal root ganglia or trigeminal neurons. NaN nucleic acids are used in gene therapy to correct indisorders associated with decreased sodium channel expression or (antisense) to down-regulate NaN expression, in the diagnosis of

This is the nucleotide sequence of an isolated nucleic acid which encodes the mouse NaN channel (see AAY06597), a previously unidentified voltage gated sodium channel protein that is preferentially expressed in dorsal root ganglia (DRG) or trigeminal ganglia, and which produces a TTX-R sodium current. The NaN channel CDNA was obtained from mouse trigeminal ganglia cDNA by PCR amplification using rat NaN based primers (see AAX87618-19). Rat, mouse and human NaN nucleic acids (see AAX87600-02) and polypeptides (see AAX06596-98) are provided. The invention also includes expression vectors and transformed host cells, methods for identifying tissues and cells that express NaN, methods for identifying tissues and cells channel activity or NaN channel mRNA transcription or translation, and a method for using such agents to treat acute or chronic pain, expression of NaN in censory DRG and frinceminal neurons provides a
                                                                                                                                                                                                                                                                                                                                                                     New isolated nucleic acids encoding sodium channels, used to develop products for treating acute or chronic pain or hyperexcitability
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          expression of NaN in sensory DRG and trigeminal neurons provides a target for selectively modifying the behaviour of these nerve cells while not affecting other nerve cells in the brain and spinal cord.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  gene encoding NaN has been named Scn11a.
                                                                                                                                                                                                                                                                                                                                                                                                                                            Claim 1; Fig 7A1-3; 91pp; English.

```

dorsal root ganglia or trigeminal neurons. NaN nucleic acids are used in gene therapy to correct disorders associated with decreased sodium channel expression or (antisense) to down-regulate NaN expression, in the diagnosis of disease, and in the recombinant production of NaN polypeptides. tetrofotoxin resistant sodium channel, termed NaN (see AAB20121). The CDNA was isolated from a human dorsal root ganglia tissue CDNA library by PCR amplification (see also AAB70122-3). NaN belongs to the a-subunit voltage-gated sodium channel protein family and produces a TTX-R sodium current. Such channels underlie the generation and propagation of impulses in excitable cells such as neurons and muscle fibres. Preferential expression of NaN on sensory neurons innervating the body (dorsal root ganglia) and the face (trigeminal ganglia), but not on other neurons, makes it a very useful target for diagnostic and/or therapeutic uses in an relation to acute and/or chronic pain pathologies. A claimed method of treating pain, paraesthesia and/or hyperexcitability phenomena in a human or animal subject involves administering a agent that alters sodium current flow through NaN channels, or which modulates transcription or translation of NaN mRNA, in The present sequence is that of cDNA encoding a novel human

```

```
agent that alters sodium current flow through NaN channels, or which modulates transcription or translation of NaN mRNA, in dorsal root ganglia or trigeminal neurons. NaN nucleic acids are used in gene therapy to correct disorders associated with decreased sodium channel expression or (antisense) to down-regulate production of NaN polypeptides.

The CDNA was isolated from a human dorsal root ganglia tissue CDNA library by PCR amplification (see also AAF30122-23). A full-length segvence is given in AAF30101. Human NaN belongs to the a-subunit voltage-gated sodium channels underlie the generation and propagation of impulses in excitable cells such as neurons and muscle fibres. Preferential expression of NaN on face (trigeminal ganglia), but not on other neurons, makes it a very useful target for diagnostic and/or therapeutic uses in
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         the present sequence is that of a partial cDNA for a novel human
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  relation to acute and/or chronic pain pathologies. A claimed method of treating pain, paraesthesia and/or hyperexcitability phenomena in a human or animal subject involves administering agent that alters sodium current flow through NaN channels, or

4176 nucleic acids encoding sodium channels, used to develop treating acute or chronic pain or hyperexcitability the nucleotide sequence of a partial cDNA clone which codes ggtctcgtgttcgacatagtcacaagccagatctttgacatcatcatcataagtctcatt gcctttgtgttcgacctggtcacaagccaggtctttgacgtcatcattctgggtcttatt gtcttaaatatgattatcatgatggctgaatctgccgaccagcccaaagatgtgaagaaa acctttgatatcctcaacatagccttcgtggtcatctttaccatagagtgtctcatcaaa ganglia; gene; ss. gtctttgctttgaggcaacactacttcaccaatggctggaacttatttga 4286 sodium channel; ion transport; human; dorsal root paraesthesia; hyperexcitability; therapy; SCN11a This is .rng

contage gated sodium channel protein that is preferentially expressed in dorsal root ganglia (DRG) or trigeminal ganglia, and expressed in dorsal root ganglia (DRG) or trigeminal ganglia, and thich produces a TTX-R sodium current. The NaN channel cDNA was obtained from human DRG tissue cDNA by PCR amplification (see also AXA87620-22). Rat, mouse and human NaN nucleic acids (see AAX87600-02) and polypeptides (see AAY06596-98) are provided. The invention also includes expression vectors and transformed host cells, methods for identifying tissues and cells that express NaN, methods for identifying agents that modulate NaN channel activity or NaN channel manA transcription or translation, and a method for using such agents to treat acute or chronic pain, paraesthesia and hyperexcitability phenomena. The preferential expression of NaN in sensory DRG and trigeminal neurons provides a target for selectively modifying the behaviour of these nerve cells while not affecting other nerve cells in the brain and spinal cord. The named SCN11a 13 gene

                                                                                                                                                                                                                                                                                                                                                                                                                                                          The invention provides purified and isolated rat and human peripheral nerve tetrodotoxin (TTX)-resistant sodium channel alpha subunit proteins. The rat peripheral nerve sodium channel type 3 (PN3) protein or its human homologue are useful for the development of antibodies against PN3 which are useful in affinity chromatography to purify recombinant sodium channel proteins or polypeptides, or as a research tool. The PN3 proteins are useful as therapeutic targets for compounds to treat disorders of the peripheral nervous system such as allodynia, hyperalgesia, diabetic encopenty, tranmatic injury and acquired immunodeficiency syndrome encoding the rat PN3 protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              21;
                                                                                                                                                                                                                                                                                                                                                           New rat and human tetrodotoxin-resistant, voltage-gated sodium channel proteins, present in peripheral nerve tissue, useful as a therapeutic target for compounds treating peripheral nervous system disorders
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               cctaaaggcctccaggaagttacctaagctttatggtgacattccccctgagcttgttac 272

```
The sequences given in AAT77803-06 encode the wild type and three variant forms of a rat sensory neuron sodium channel protein which is insensitive to tetrodotoxin. The proteins can be used for identifying modulators of the sodium channel. Blockers of the sodium channel. Blockers of the sodium channel. Blockers of the sodium channel will block or prevent the transmission of impulses along sensory neurons and thereby be useful in the treatment of acute, chronic or neuropathic pain. The novel protein is found only in sensory neurons and not in glia, muscle or the neurons of the (para)sympathetic, enteric or central nervous system. The protein is found preferably in the neurons of the dorsal root ganglia or cranial ganglia. This sequence contains 12 nucleotide differences to the wildtype rat DRG(SNS-B) (see also AAT77803) causing nine amino acid changes.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  ggacttcattgtcattggaacagcgatcgcaacttgtttccgggcagccaagtcaatct 692

The invention provides purified and isolated rat and human peripheral nerve tetrodotoxin (TTX) resistant sodium channel alpha subunit proteins. The rat peripheral nerve sodium channel type 3 (PN3) protein or its human homologue are useful for the development of artibodies against PN3 which channel proteins or polypeptides, or as a research tool. The PN3 proteins are useful as therapeutic targets for compounds to treat disorders of the peripheral nervous system such as allodynia, hyperalgesia, diabetic neuropathy, traumatic injury and acquired immunodeficiency syndrome encoding the human hPN3 protein.
                                                                                                                                                                                                                                                                                 channel
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     240

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            2622
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The cDNA is derived from 3 overlapping cDNA clones, designated plasmid pRH3-1 (ATCC 67885), plasmid pRH4-23 (ATCC 67886) and plasmid pRH14-31 (ATCC 67887). A virus/circular DNA plasmid vector comprising the CDNA may be transformed or transfected into a prokaryote/eukaryote host cell, and the resulting recombinant sodium channel protein has various therapeutic, diagnostic and prognostic uses. It may also be used to develop more effective antiarrythmic,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    cggaccatcatgacggatccctttactgagctggccatcaccatctgcatcatcaaat

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Sequence 13, Sequence 14, Sequence 17, Sequence 24, Sequence 7, A Sequen
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Sequence 1, A
